DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-9 are rejected under 35 U.S.C. 103(a) as being unpatentable over Sims III US 6,550,011 in view of Gruse US 6,398,245 in view of Ansell US 6,367, 019

As per claims 1, and 5, Sims III teaches a media distribution system in which the media data is encrypted with a symmetric key, (Col 10 lines 15-20, 53-60). Sims III teaches distributing the symmetric media key by encrypting it with a public key (Col 10 lines 45-55). Sims III teaches decrypting said media key with a private key, and using said media key to exchange data, (Col 10 lines 55-65). Sims III teaches use of watermarks based on the owners information, (Col 15 lines 10-15, Col 21 lines 15-21).

Sims III does not teach player identification in watermark data.

Gruse teaches use of copyright watermarks including player identification and using the player to modify watermarks, (Col 11 lines 22-45).

It would have been obvious to one of ordinary skill in the art to use the player identification in a watermark because it further discourages copyright violation.

Ansell teaches the end user player device authenticating another compliant device and encrypting data with a media key, and encrypting a media key with a public key of the compliant device (Col 2 lines 52-67, Col 3 lines 1-15).

It would have been obvious to one of ordinary skill in the art to include the end user player functionality because the system allows the user to share legally owned music securely.

As per claims 2, and 6 Sims III teaches the public key uses an asymmetric algorithm, (Col 4 lines 6-8).

As per claims 3, 7, and 9, Sims III teaches using owner watermark identification and copy-control information, (Col 15 lines 10-15, Col 21 lines 15-22).

As per claims 4, and 8, Gruse teaches using owner watermark data with player data, (Col 11, lines 15-44).
